

Bluetooth® Communications System

The **Bluetooth® Communications System (BCS)** is a unique monitoring, recording, and broadcast system developed for specialized law enforcement/military team applications including Hostage/Crisis Negotiations, Investigations, and Undercover Narcotic Operations.

The **BCS** can be paired to **ANY** Bluetooth® enabled cell phone, allowing team staff to place and/or receive landline or cell phone calls. Once the call is connected, the communications taking place through the **BCS** can be monitored (listened to) and/or broadcast by multiple team staff by connecting Monitoring Headphones as well as RCA and/or RJ11 compatible speakers. The communications may also be recorded for evidentiary purposes by connecting a Digital or Analog (tape) recorder to the System. During prolonged operations the cell phone paired to the BCS can be charged by connecting the cell phone into the System's built-in "Cell Phone Charger" port.

The **BCS** is also equipped with an "Auxiliary Phone Out" which allows the System to be integrated with an agency's existing Crisis Response (Throw Phone) System. Crisis Negotiation Team (CNT) staff can use the **BCS** to establish immediate communications to initiate negotiations with a subject involved in a hostage/barricade incident and later seamlessly transfer the negotiations to the Crisis Response System upon its arrival by using a standard RJ11 Telephone Patch Cable!

FEATURES/BENEFITS:

- **Crisis Response System Compatibility:** CNT staff can use the System to initially establish cellular communications with a barricaded subject and later transfer/link the communications their agency's existing Crisis Response System to expand audio monitoring and broadcast capabilities.
- **Investigations:** Allows Investigators to monitor (listen to) and record cell phone victim, witness, and suspect telephone calls for evidentiary purposes.
- **Drug Enforcement:** Add recording and multiple monitoring capabilities to the Advanced C-RAID™ Phone and Bug.
- **Mobile Field Use:** Features an internal rechargeable battery encased in a military specification Pelican™ case that can be powered from a vehicle's D/C power supply port or external 120V A/C wall power supply.
- **Built-in Cellular Phone D/C Power Port:** Charges cell phone's battery during prolonged operations.
- **Multiple Monitoring, Recording, & Broadcast:** Delivered with (2) Dual-Cup Monitoring Headphones and a 128 MB Digital Audio Recorder.
